MESH

## MESH 304 – MESH 316

### Description

Wire mesh braided at 94 meshes with a 304 or 316 stainless steel wire (0.0035?). It resists to maximum temperatures of 1400°F and has 0.0071? diameter holes. It offers an increased resistance to corrosion when in contact to chemical substances.

### Applications

This strong wiring is used to protect mattresses or put inside to make them more rigid.
